

The screenshot displays the Postman application interface. On the left, the 'My Workspace' sidebar shows a collection of API endpoints under 'Petstore V3', with 'GET Get user by username' selected. The main panel shows the request details for this endpoint. The request is a GET method to the URL `https://petstore.swagger.io/v2/user/{{username}}`. The 'Scripts' tab is active, showing a JavaScript test script:

```
1 pm.test("Response contains string available", function () {  
2   var responseBody = pm.response.json();  
3   pm.expect(responseBody.username).to.have.string("Mnogoletka")  
4 }  
5
```

The 'Test Results' tab at the bottom shows a successful response with a status of '200 OK', a response time of 623 ms, and a body size of 513 B. The test result is 'PASS' with the message 'Response contains string available'.
